What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What are grid-connected and off-grid PV systems?

Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind. Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system.

What is PV module efficiency?

PV module efficiency is the ratio of the electrical power output P_{out} , compared to the solar power input P_{in} , hitting the module. P_{out} can be taken to be P_{MAX} , since the solar cell can be operated up to its maximum power output to get the maximum efficiency. The efficiency of a typical solar array is normally low at around 10-12%.

Can a 400W solar panel be connected in parallel?

If you connect more than one or two 400W portable solar panels in series, the total output voltage will exceed 12V, and you'll blow a fuse (at best). However, many grid-tied and off-grid residential solar power systems require high voltage, which can't be achieved by wiring in PV modules in parallel.

In general, stand-alone systems are comparatively small systems, typically with a peak power generation of under one kilowatt. It is often a good idea to start with a very small and simple stand ...
