

Cutting down trees to build solar power stations

As solar energy capacity grows by 38% annually globally (2024 IEA Renewables Report), developers face a tough question: Should we sacrifice forests to build solar farms?

In this case, trimming your trees to open up your solar system to more direct sunshine is the clear eco-winner. Quite simply, if you have large trees near the roof of your house, this causes ...

Harvard Forest researchers have co-authored a landmark report detailing how many projects have required the clearing of carbon-absorbing forested areas, unnecessarily harming ...

Trees casting shadows over panels can significantly reduce their electricity production. Therefore, cutting down trees that obstruct sunlight may enhance the performance of solar panels ...

It's a difficult truth, but unfortunately, solar power and trees don't ...

While solar energy has immense potential in the fight against climate change, cutting forests for solar farms represents a misguided approach that "misses the plot" of climate action.

Do Trees really need to be cut down? Forests offer vital and unquantifiable benefits aside from just carbon sequestration. Because solar panels can be fitted on many kinds of impervious surfaces, ...

It's a difficult truth, but unfortunately, solar power and trees don't get along. Branches and leaves can block sunlight from hitting your roof, so your solar panels aren't generating as much clean ...

While forests are invaluable for carbon sequestration and biodiversity, the claim that cutting down trees for solar panel installation negates climate benefits is misleading.

Forests have immense ecological benefits, recreational benefits, and intrinsic value. However, when looking at the narrow but important issue of carbon accounting, it is usually not true that removing ...

Forests have immense ecological benefits, recreational benefits, and intrinsic value. However, when looking at the narrow but important issue of carbon accounting, it is usually not true ...
