

Demand response washington d c

What is Washington DC's electric demand response potential?

The electric demand response potential estimates for the residential and commercial sectors in Washington D.C. are provided in this section. The estimates include the technical, economic, and achievable potential. The summer peak demand in Washington D.C. is projected to reach 2,739 MW by 2022, growing at an average rate of 1% per year.

What is a demand response program?

A demand response program is called often enough to effectively lower the forecast of system peak demand (see the textbox above). Differences in market structure influence the timing and distribution of short-term and long-term market impacts of demand response in important ways.

Is there a demand response capability in the United States?

Limited demand response capability exists in the United States at present. The Energy Information Administration (EIA) has response capability collected annual information on demand-side management (i.e., exists in the U.S. at energy efficiency and load management) from industry participants since the early 1990s.

What is demand response?

Demand response, defined broadly, refers to participation by retail customers in electricity markets, seeing and responding to prices as they change over time. Any commodity market--oil, gold, wheat or tomatoes--consists of both sellers, or suppliers of the commodity, and buyers, or consumers of the goods.
