

European union behind-the-meter energy storage

How many GWh of energy storage will be installed in Europe?

Consultancy Wood Mackenzie forecasts that 89GWh of grid-scale BESS capacity will be installed in Europe by 2031 - a 20-fold increase over 2022. The UK, Italy, Germany and Spain are the four largest markets for BESS in Europe. Figure 1. New capacity forecasts for top 10 European grid-scale energy storage markets 2022-2031 (GWh).

What is behind-the-meter battery energy storage system (BTM)?

Behind-the-meter (BTM) Battery Energy Storage Systems (BESS) have proven a reliable technology able to provide several services while achieving savings and revenues.

What is the European Association for storage of Energy (EASE)?

*** About EASE: The European Association for Storage of Energy (EASE) is the leading member-supported association representing organisations active across the entire energy storage value chain. EASE supports the deployment of energy storage to further the cost-effective transition to a resilient, carbon-neutral, and secure energy system.

What is behind the Meter (BTM)?

In Europe, the term behind-the-meter (BtM) is often used to describe any form of storage or generation that is not utility-scale (i.e. EASE, 2023). As co-located and BtM BESS have very different commercial and operating characteristics, we will refer to them collectively as hybrid storage assets:

Energy storage systems (ESSs) can help make the most of the opportunities and mitigate the potential challenges. Hence, the installed capacity of ESSs is rapidly increasing, both in front-of ...

A resilient and cost-efficient energy system requires both centralised and decentralised flexibility, making the reactivation of residential and commercial storage a priority. This edition of the ...

The inexorable growth of renewable power in Europe The large-scale integration of renewable power sources in European grids marks a significant transition in the energy landscape and plays a central ...

In order to promote the deployment of renewable energies, both thermal and electric, in the different consumer sectors, encourage greater control of consumption through the development of behind-the ...

(8) Energy storage, in particular "behind the meter", can help consumers, both households and industries, to maximise self-consumption of self-produced renewable energy, ...

3 Opportunities for behind-the-meter and co-located BESS The deployment of battery energy storage systems (BESS) is key to reaching the EU's decarbonisation targets outlined in Fit ...

The growing need for flexibility in Europe is driving the development of local flexibility markets (LFM). To

European union behind-the-meter energy storage

address the uncertainties of distributed energy resources (DERs) participation in ...

Joint industry statement In its proposal to improve the Union's electricity market design from March 2023, the European Commission proposed to explicitly exclude behind-the-meter ...

Introduction Behind-the-meter (BtM) Battery Energy Storage Systems (BESS) have proven a reliable technology able to provide several service while achieving savings and revenues. ...

This week, we'll be looking at behind-the-meter Solar and Battery Storage projects, with a particular focus on Europe. We discuss the most important factors that drive the economics of these ...
