

# How many photovoltaic panels does China need

China's solar industry continues to be a formidable force in the global market. In the first half of 2025, the country exported 95.6 GW of PV modules, a figure that underscores the rising ...

China's installed solar photovoltaic capacity has now surpassed 1,000 GW for the first time, equivalent to half of the world's total installed solar capacity. The record numbers come as...

As of at least 2024, China has one third of the world's installed solar panel capacity. Most of China's solar power is generated within its western provinces and is transferred to other regions of the country.

That production capacity isn't just helping China, where consumer rooftop photovoltaic (PV) cells accounted for 60 percent of new solar infrastructure in the first quarter of 2025.

China has been the largest solar PV market far and away for several years now (I'll come back to that later in a minute), but it's stunning to see that the solar market there is now more than...

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate...

Residential PV in China saw a significant decline in 2024. According to the NEA, only 6.9 GW of residential PV capacity was added in the first quarter of 2024, down 23% from the first quarter...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

The world will almost completely rely on China for the supply of key building blocks for solar panel production through 2025. Based on manufacturing capacity under construction, China's share of ...
