

What is a solar microinverter system?

The term, "microinverter", refers to a solar PV system comprised of a single low-power inverter module for each PV panel. These systems are becoming more and more popular as they reduce overall installation costs, improve safety and better maximize the solar energy harvest. Other advantages of a solar microinverter system include:

How do I install a solar micro inverter?

Mount the Solar Micro Inverters on the Racking Every micro inverter is installed on the racking system underneath each solar panel. Align the inverters with the mounting brackets on the racking. Use screws or mounting clips to secure them tightly.

What is a solar photovoltaic (electricity producing) solar power system?

Here is a small solar photovoltaic (electricity producing) solar power system which includes charge regulation, monitoring and fused outputs all within a laser cut enclosure. Its designed to be a entry level solar power system to recharge small devices such as mobile phones, mp3 players and power small sound systems.

What are the requirements for a solar inverter system?

There are two main requirements for solar inverter systems: harvest available energy from the PV panel and inject a sinusoidal current into the grid in phase with the grid voltage. In order to harvest the energy out of the PV panel, a Maximum Power Point Tracking (MPPT) algorithm is required.
