

Apart from battery technology, thermal storage systems is an area of search for solar PV companies where the search is focused on exploring energy storage solutions.

In the database you will find information on the important legislation on the support schemes, grid issues and policies for energy from renewable sources covering all three energy sectors: electricity, heating ...

The government will conduct a predictable, efficient, and flexible process to award industrial players access to relevant storage options. Areas that are relevant for awards will be ...

It examines the technical building regulations (TEK17) and requirements for solar-ready buildings, building-integrated photovoltaics (BIPV), grid connection and licensing thresholds, the...

The Norwegian target includes both small-scale building mounted solar, and utility-scale solar power plants, but the share is not determined. An investigation of the main political drivers and ...

Norway introduces new energy rules to boost renewable energy sharing within industrial areas, encouraging investments in PV systems and reducing energy costs.

This paper investigates the potential role of solar photovoltaic (PV) in a Norwegian future energy system, focusing on the trade-offs between land use and increased RES integration.

This article reviews the government policy and regulatory framework for renewable energy in Norway, with particular regard to recent developments.

Norway's Ministry of Energy is defining regulatory changes to enable surplus renewable power from plants up to 5 MW to be shared within industrial areas. Energy Minister Terje Aasland said...

On 19 December 2023, the Norwegian government issued a consultation paper for proposed amendments to the Energy Act and the Planning and Building Act related to solar power ...

New norwegian pv energy storage regulations
