

Old wind turbine

Following experience with reconditioned 1930s wind turbines, a new generation of American manufacturers started building and selling small wind turbines not only for battery-charging but also ...

Tens of thousands of old wind turbines are set to retire globally every year - and many of them are bound to get scrapped. But some companies are trying to save them.

More than 86,000 wind turbines were built in 45 states (plus Guam and Puerto Rico) from 1981 through early 2024. More than 11,000 of those have been decommissioned since 1992.

When wind turbine blades reach the end of their 20-to-25-year service lives, they usually end up in landfills. But in the past several years, energy companies have sought ways to avoid burying ...

As science has advanced and grown more complex, wind turbines have become an important part of wind power. In this article, we're going to look more closely at some of the oldest ...

There is quite a bit of offshore wind capacity off the shore of Ireland, so these folks have a ready supply of used wind turbine blades to use to build these bridges.

Wind power goes as far back at least as 9th Century BC Persia, where sails were used to grind grain and draw up water on the windy Sistan plains. Scottish professor James Blyth built the first...

Explore the fate of old wind turbines in this in-depth video that covers various aspects of wind energy and its challenges. The discussion begins with an introduction to the current state of...

Overview 20th century Antiquity Early Middle Ages Late Middle Ages 18th century 19th century 21st century Development in the 20th century might be usefully divided into the periods: o 1900-1973, when widespread use of individual wind generators competed against fossil fuel plants and centrally-generated electricity o 1973-onward, when the oil price crisis spurred investigation of non-petroleum energy sources.

Wind turbines are ageing - what happens next? With an average lifespan of 25 years, a high proportion of wind turbines across the world are approaching retirement.

Unfortunately, most used wind turbine blades end up in landfills, which detracts from the 'green' aspirations of wind power. A 2015 study published in the journal Waste Management projects ...
