

Poland's ambitious nuclear energy plans, while politically popular, raise questions about their practicality and alignment with the country's energy transition goals.

The eighth edition of the report Energy Transition in Poland. Edition 2025 by Forum Energii shows that while change is happening, it remains inconsistent, costly, and insufficient in the face of current ...

Political divide over climate and energy transition. Centre-right and far-right parties in Poland have been highly critical of EU climate policy (and sometimes going into climate denialism), ...

On 2nd February 2021 the Council of Ministers have adopted the Energy policy of Poland until 2040 (EPP2040). The document presents an ambitious, consistent and responsible way of carrying out the ...

Although the Polish energy sector is still predominantly coal-based, the transition away from this reliance is becoming a reality. While Poland is now on track to pour the first concrete for its ...

Poland has the potential to carry out an ambitious energy transition, considering its renewable energy potential, plans for nuclear power, and public support for change.

Poland stands at a critical juncture in its energy transition, driven by the urgent need to replace coal-dependent generation while meeting rapidly growing electricity demand.

Poland has committed to a 53.9% reduction in emissions by 2030 and to achieving a share of renewables higher than the binding EU target. The NECP considers two scenarios for the transition. ...

In this annual report, Forum Energii analyzes the state of Poland's clean energy transition and provides data that is essential for sound decision-making such as trends in generation sources, consumption, ...
