

Quick check table of wind power generation

WindWatts offers quick, approximate wind resource estimates. For more detailed or location-specific data, consider reaching out to local wind installers who may share insights from nearby projects. To ...

Wind supplies 57% of Denmark's electricity generation and over 20% in ten other countries. 7 Global wind additions reached a record 117 GW in 2023. 7 In 2024, onshore installations surpassed 100 GW ...

In 2017, a total of 15,680 MW of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity ...

Total annual U.S. electricity generation from wind energy increased from about 6 billion kilowatthours (kWh) in 2000 to about 434 billion kWh in 2022. In 2022, wind turbines were the source ...

The Wind Power is a comprehensive database of detailed raw statistics on the rapidly growing sphere of wind energy and its supporting markets.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

Visit our basics pages to learn how wind energy produces power and see an animation of how wind turbines work.

In 2017, a total of 15,680 MW of wind power was installed, representing ...

The wind speed, as you would expect, is critical for electricity generation. This map data assumed a wind turbine hub height of 100 m (the significance of hub height will be covered shortly).

Also includes information on each country's actual yearly production of wind-generated electricity, as well as the amount of electricity generated in offshore wind farms as compared on onshore farms.

Offshore Wind Farm Announced, Pre-construction, and Construction Capacity by Country/Area and Year (MW) February 2026
