

The objective of this study is to propose a new field-testing approach to evaluate the heating, ventilation and air-conditioning (HVAC) energy-saving potential of occupancy-driven thermostats and ...

Currently, heating, ventilation, and air-conditioning (HVAC) systems are often run based on assumed occupancy levels and fixed schedules, or manually set by occupants based on their comfort needs.

The solar photovoltaic air conditioner worked independent of the grid when solar radiation was stable, mainly between 8:30 am and until 15:00 pm in the afternoon.

This paper has discussed different types of solar-driven air-conditioning systems that can serve as an alternative to reduce the energy consumption of conventional electrical driven air-conditioning systems.

Abstract The present study used a TRNSYS simulation for solar cooling with cold energy storage. It was applied to a tent hypothetically located in Mina zone, KSA, where millions of pilgrims stay in tents for ...

Any solar-assisted air-conditioning system that consists on chilled water storage tank, variable-speed chilled water pump and real-time occupancy detection system can easily use the methodology ...

This paper presents and discusses a general overview of solar cooling and air-conditioning systems (SCACSs) used for building applications. The popular SCACSs driven by solar thermal energy are ...

In this study, the effect of air conditioners (ACs) on reducing energy consumption in the case of supporting AC systems used in residential air conditioning with solar energy from renewable energy sources ...

Learn how to size HVAC systems with rooftop solar. Match cooling loads to PV output, cut grid reliance, and boost comfort with smart design strategies.

In this article, we review OCC research, focusing on field-implementation case studies in actual buildings under realistic use conditions. First, we analyze the topical aspects of these studies,...
