

# Songdu New Energy Energy Storage is put into operation

China has put the first large-scale sodium-ion battery storage station into operation, marking the beginning of the adoption of the new, lower-cost battery for large-scale use.

China has been stepping up construction of new energy storage in recent years to build a new power system in the country amid its green energy transition, said authority.

According to the NEA, the northwestern parts of the country have seen the fastest development of new-type energy storage facilities, with 10.3 GW of such capacity having been ...

China's first large-scale lithium-sodium hybrid energy storage station began operations on Sunday in Southwest China's Yunnan Province.

Up to now, the total installed capacity of Aksu power grid is 9,066 MW, of which 6,388 MW of clean energy is installed, accounting for 70.46% of the total installed capacity, and has walked out ...

By the end of June, the cumulative installed capacity of new energy storage projects completed and put into operation in China has exceeded 17.33 million kilowatts, with an average ...

Their energy storage systems enhance the utilization of renewable energy sources, allowing for better integration into the grid. By facilitating energy storage, Songdu enables ...

The largest single grid type energy storage project in China is connected to the grid and put into operation

Sodium battery liquid cooling energy storage system developed by Sodium-based Technology has been delivered and put into operation. Technology boosts the development of new ...

In June last year, a 100-megawatt-hour sodium-ion energy storage project began operation, representing the first large-scale commercial use of sodium-ion energy storage globally.
