

The locker can change its door by itself

Do you have a door that closes or opens by itself? This is a project that doesn't take long and will make your life a whole lot better. You'll be kicking yourself for not doing it sooner. Before this ...

By bending the hinge, you have increased the internal resistance within the hinge, so it keeps the door from moving as easily as before. If you have a really crooked frame and still need just a little more resistance, ...

Faulty lock mechanisms may require professional replacement rather than DIY repair. Jammed locks can be fixed with a toothpick or old toothbrush, but stubborn jams may need lubrication. A key that ...

As long as the mechanism is as shown in the web link provided, with 2 square spindle holes rather than just 1, it can be converted so that the door cannot be opened from the outside just by pulling the ...

There are a few common reasons for a door to lock by itself, such as a misaligned strike plate, a faulty lock mechanism, or even changes in temperature and humidity causing the door to expand or contract.

Imagine staying at home, watching a movie, or reading a book, when suddenly the door opens by itself. You're so spooked, you can't come back to the story you were just immersed into.

In this quick and easy DIY fix, I'll show you how to stop it using just a hammer and a hinge pin!

In this video, How to Fix a Door that Opens or Closes by Itself, home renovation brothers Dave and Rich and Dave's son, Caleb show you an easy hack to stop your door from swinging open or...

The most likely reason for your door opening and closing on its own is because the wall surrounding the door is likely leaning one way or the other. Gravity does the rest then and causes the door to ...
