

# The price of flexible photovoltaic bracket installation

What are the different types of PV brackets?

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV bracket. This refers to the mounting system where the orientation, angle, etc. remain unchanged after installation.

Why should you choose a PV bracket?

The choice of bracket directly affects the operational safety, breakage rate and construction investment of PV modules. Choosing the right PV bracket will not only reduce the project cost, but also reduce the post maintenance cost.

What is the installation angle of PV modules?

The installation angle of PV modules in flexible mounts is generally small, usually 10°-15°. Flexible bracket is mainly applicable to scenarios such as mountainous projects with large slope (e.g. above 35°), fishery-photovoltaic and agricultural-photovoltaic projects with high headroom requirements.

What is PV flexible racking?

PV flexible racking is a kind of large-span PV module support structure fixed at both ends and formed by pre-stressed flexible cable structure. The span of the cable structure is usually between 20 and 40 meters, up to 100 meters.

Brackets are one of the most important accessories for installing PV, and there are many types to choose from in the form of connection, mounting structure, and installation location.
