How do I choose a solar hot water system?

A site assessment helps you determine if your roof gets enough sunlight during the day and whether it can bear the weight of the solar panels. A south-facing roof, with little to no shade, tends to be the most beneficial. Understanding how a solar hot water system works can be quite enlightening (pun intended!).

How to install a solar water heater?

The primary tools needed for your solar water heater installation include a drill, adjustable wrenches, pipe cutters, soldering kit, and safety gear. The main materials you'd need to procure include a solar collector, a storage tank, a controller, a circulating pump, expansion tank, various pipes, and fittings.

How to install solar panels?

The first step in the installation process is to determine the optimal location for the solar panels. Ideally, they should be installed on a south-facing roof or a ground-mounted structure that receives maximum sunlight throughout the day. The solar panels should be tilted at an angle to maximize the exposure to the sun's rays.
