

Tips for transporting solar panels on rooftops

Should you install solar panels on your roof?

Installing solar panels on your roof isn't just about securing them in place--it's also about getting them up there without breaking your back (or the panels). If you're planning to DIY your solar project, make sure you consider this part of the process.

How do you raise a solar panel on a roof?

Place soft padding (such as foam,towels,etc) on the ladder rungs to prevent scratching. Lift the panel flat onto the ladder and carefully push it up. If a friend is helping,one of you can push from below while the other pulls from above. If you're working by yourself,you can carefully walk the panel up until you can rest it on the rooftop.

How do you secure a roof panel?

Attach ropes with soft straps or harnesses to the panel's frame. One person on the ground pulls the rope while another person on the roof guides and secures the panel. If you're moving a lot of panels,have awkward roof access,or are working on a large project,sometimes you just need to bring in the big guns.

How do you lift a roof panel?

One person stands on the roof while the other lifts the panel from the ground, using their shoulder for support (pro tip: using some padding can help prevent a sore shoulder later on). The person on the roof grabs the top edge and carefully pulls it up.
