

Norwegian firms are involved in project development, operation and maintenance and/or ownership of large utility scale PV plants, as well as sales and installation of decentralized solar home systems or ...

The potential is large, but it will only be unlocked with favourable framework conditions. This article analyses how Norway's regulatory landscape for solar energy is changing rapidly.

This research study delves into the solar energy potential and capacity in Norway, aiming to assess the viability of solar power integration in the country's urban landscape.

This target encompasses both small-scale rooftop installations and large utility-scale solar power plants, though the share between them is undetermined. This article analyses current ...

Norway installed 117 MW of solar in 2025, according to figures published by the Norwegian Water Resources and Energy Directorate (NVE). The result is down on both 2024's result ...

Norway expanded its solar capacity by 49 MW in the first half of 2025, according to the Norwegian Water Resources and Energy Directorate (NVE). This development brings the country's ...

While solar has been developing slowly in Norway, Denmark and Sweden are further ahead, although they all have likely barriers and different regulatory frameworks and licensing processes.

Nevertheless, Norway is making great strides in developing the technology, materials and solutions needed to make use of the largest energy source in our solar system.

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its energy landscape. ...

About half of the capacity is installed on households - the rest for industrial and commercial use, with a very limited Utility scale solar. Though modest compared to the other Nordic neighbours, the growth ...

Utility-scale solar norway
