

What are the EU hydrogen energy base stations

They serve as key cross-border infrastructure projects that link the energy systems of EU countries, aiming to enhance energy security, sustainability, and efficiency.

This updated map displays the status of planned hydrogen projects in 2030, 2040 and 2050 and spans hydrogen projects for gas distribution, transmission, import terminals, storage, ...

The European Hydrogen Backbone creates an opportunity to accelerate decarbonisation of the energy sector by efficiently integrating substantial volumes of additional renewable and low-carbon energy ...

Early hydrogen infrastructure enables a competitive European energy transition on multiple fronts, facilitating large-scale deployment of renewable energy and hydrogen production, allowing for ...

If new "hydrogen-capable" infrastructure comes online without green hydrogen to supply it, or without green hydrogen that is cost-competitive, this infrastructure could lock in fossil fuel ...

The map shows projects scheduled for 2030, 2040 and 2050. To date, the database comprises 160 production projects, 120 for transmission, 60 for storage, 50 for distribution, 20 ...

Among the confirmed projects, developers will build 38 new hydrogen refuelling stations. These will serve cars, trucks and buses, helping expand the use of hydrogen-powered vehicles in ...

ENNOH, the European network of Network Operators for Hydrogen, is expected to be established in 2025 and will coordinate the work of the EU Hydrogen Transmission Network of ...

"The update of the Joint Hydrogen Infrastructure Map shows the ever-expanding network of hydrogen infrastructure to support the emerging hydrogen market for a decarbonised energy system in Europe."

Get latest insights into publicly accessible and operational hydrogen refuelling stations in Europe in 2025.
