

# When will we install solar power generation

"In our most recent monthly inventory of power plants, developers reported plans to bring 32 GW of solar capacity online in the next 12 months (October 2025 through September 2026)," EIA ...

The U.S. Energy Information Agency expects growth in U.S. power generation over the next two years to be mostly driven by new solar plants, it said on Friday.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The first six months of 2025 saw wind and solar together pass a historic milestone, generating more power than coal for the first time and making renewables the world's leading source ...

Solar and batteries will dominate US power plant construction in 2025. Explore the trends shaping our energy future today!

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

With deployment surging across key markets and China's rapid scale-up pushing global installations to new highs, 2025 is on track to become another historic year for solar power. The ...

Discover why rising electricity prices make solar a great investment in 2026, even after the 30% federal tax credit expires. We break down the long-term savings.

"We expect U.S. utilities and independent power producers will add 26 gigawatts (GW) of solar capacity to the U.S. electric power sector in 2025 and 22 GW in 2026," EIA stated in its latest ...

The trajectory is clear: solar is set to dominate new electricity generation in the U.S. for years to come. Financing and policy may bring turbulence, but the long-term growth path remains ...
